

Promote Safety and Security in Our Schools with Allworx Educational Market Sales Incentives

The safety and security of youth in our schools is important to all of us. Allworx and TCG Network Services believe every school district should have a modern phone system designed to meet the needs of schools – one that has backup capability and can be easily configured with 911 notifications as school administrators and safety personnel recommend.

Distribute Urgent Notifications to the Widest Audience

With the Allworx system, notifications of a 911 call attempt can be sent to any combination of Allworx IP phones and mobile devices. In addition, the Allworx system can also send emails and text messages when a 911 call is attempted. These powerful features help ensure that urgent news reaches the people best able to implement timely safety procedures.

Too Many Schools Have Outdated Phones

Allworx designed a new IP phone, the Allworx® Verge™ 9304, that is ideal for classrooms. It provides simple plug-and-play installation, is extremely flexible in configuration options and call routing, and – of course – is fully equipped with the 911 Alert feature.

Helping Financially Burdened Schools

Beyond the technology, Allworx wants to assist schools **financially** to allow them to update their communications capabilities. For every 100 Allworx Verge phones purchased for a school district by TCG Network Services, **Allworx will provide 15 Allworx Verge 9304 phones for this school district at no charge.**

Let's work together to help our children's schools modernize their communications systems.
